PROJECTS

Homley

[Github repository](#)

Tech stack used

- For the frontend used react.Js library along with ant design library for UI.
- React-router-dom was used for routing of pages.Also used react- bootstrap library for specific designing.
- For backend used node.Js server along with express.Js framework.
- MongoDB is used as database and applied basic engineering knowledge.

Project Description:-

- Developed a reponsive website for the people of my city who suffer a lot whlie serching for a flat ,room or PG and sometimes get looted by the broker's as well.
- This makes it easy to both buy,rent and sell houses .It makes the user to directly contact the owner without any fraud in between.

Movie-Verse

[Github repository](#)

Tech stack used:-

- Created the frontend using react.js and ant design UI library.
- API's were taken from omdb sites using axios.
- React hooks were used to get the data from the API.

Project Description:-

- Desiged movie-verse such that user can any time search for any movie or web series deatils.
- As soon as the user starts typing it will show all the movies having that letter or word in its name.
