- **IDE** : VS-code.
- **Technology** : HTML5, CSS3/SASS, Javascript, Bootstrap, Redux, Rest API,
OOPs, Agile, SDLC, JIRA, Version control.

PROJECT DETAILS:

Project - Student Portal

Description: Student Portal (SP) using React and Node server. This is the process of building the application from the scratch by segregating two different app for front-end and back-end.

Here we need to implement the frond-end using React which is new technology to the entire team so we have done lot more POC's for learning and implemented with that knowledge.

Responsibilities:

- Analyzing and Understanding the **user stories** and acceptance criteria.
- To Plan and Design the Structure and Design of **React components**.
- To Develop Website features that can enhance the user experience.
- Developing **reusable components** and **APIs**, and compiling them into front-end libraries for future use.
- Developing the user stories and do **Unit testing**. Once completed then to make the appropriate changes. So that the client aware the status of the User Stories.
- Responsible for delivering frontend related solutions within the sprint.
- Involved in all levels of **Agile** starting from planning to retrospective meeting.
