PROJECTS

Credit Card Fraud Detection

Machine Learning, Deep Learning, Data Mining

[Source Code](#)

- * As part of my college coursework, I developed a credit card fraud detection system using machine learning. I collected and processed **Kaggle Dataset** of credit card transactions and used various algorithms.
- * To improve the accuracy of the model, I also employed techniques such as **feature selection and oversampling**. Through rigorous testing and evaluation, I was able to achieve a high level of accuracy in detecting fraudulent transactions.
- * Implemented and compared the performance of various machine learning algorithms, including **Decision Tree, Random Forest, Artificial Neural Network, Naive Bayes, and Logistic Regression**.

Youtube Clone

React.js, Node.js, JavaScript, Firebase

[Source Code](#)

- * The goal of this project is to develop a YouTube clone, a web application that allows users to **upload, view, and share videos**.
- * The clone will replicate the core functionality of YouTube, including **user registration, video upload, commenting, rating, and searching**.
- * The project will be developed using modern web development technologies and frameworks such as **HTML, CSS, JavaScript, React, Node.js, and Google Firebase**.
