PROJECT EXPERIENCE

Development of a web application

As part of react project I have developed a web application using HTML , CSS AND JAVASCRIPT which is generally used to edit and format text. The functionality which I have added in this app is that it can change the format into uppercase or lowercase with a single click it also tells the user the total number of words and letter are there in the paragraph and also tells the user how much time it will take to read the whole paragraph.

Development of a web Page

I have also made several frontend projects using HTML , CSS , JAVASCRIPT.

Like made a website for gym in which people can enroll themselves

I have also made a website for restaurant and the facilities they provided
