PROJECTS

Hangman Game

Designed using Python

- Hangman is a guessing game for two or more players. One player thinks of a word, phrase or sentence and the other(s) tries to guess it by suggesting letters within a certain number of guesses. Originally a Paper-and-pencil game, there are now electronic versions.

Student Management System

Designed using Python

- Student Management System project is written in Python. The project file contains a python script (student.py).
- Talking about the system, it contains basic functions which include Add students, view students, search students and remove the student. It is too easy to use, he/she can check the total student's record.

Face Recognition System based on CNN with SVM

Using IOT Device

Designed using Python, Machine Learning (CNN)

- Face recognition is a method of identifying or verifying the identity of an individual using their face. Face recognition systems can be used to identify people in photos, video, or in real-time.
- Face recognition systems use computer algorithms to pick out specific, distinctive details about a person's face. These details, such as distance between the eyes or shape of the chin, are then converted into a mathematical representation and compared to data on other faces collected in a face recognition database.
