PROJECTS

PHP

1.Themedbubble — <https://www.idatemedias.xyz/>

Project Description:TheMedBubble is an online social and professional networking platform connecting physicians to build and deepen relationships, share interests, collaborate on projects, and advance their careers. The community promotes inclusion, wellness, and mental health, with a robust support system for physicians.

My Work

- Creating Rest Api for App

Laravel

1.Fabspin — <https://fabspin.com/>

Project Description:Laundry management system .

My Work:

- Complete backend task done as per client need it is ongoing project under maintenance

2.Mycleaners — <https://www.mycleaners.in/>

Project Description:Laundry management system .

My Work:

- Complete backend task done as per client need it is ongoing project under maintenance

3.Garaage — <https://garaage.in/>

4.WHO — <https://whosavertoolkit.com/>

5.Mr blue — <https://mr-blue.in>

Project description: laundry management system.

My work:

1. User Management:

- User registration and login: Allow customers, administrators, and employees to register and log in to the system with appropriate user roles.
- User profiles: Enable users to view and update their personal information, contact details, and preferences.

2. Order Management:

- Order placement: Allow customers to place orders for laundry services, specifying details such as type of clothing, special instructions, pickup and delivery dates/times, and payment options.
- Order tracking: Provide customers with the ability to track the status of their orders, including pickup, washing, drying, ironing, and delivery stages.
- Scheduling and notifications: Implement a scheduling system to manage pickup and delivery times, and send notifications to customers regarding order updates.

3. Inventory Management:

- Item catalog: Create a catalog of laundry items, including clothing types, sizes, materials, and special care instructions.
- Stock management: Track inventory levels of laundry supplies, such as detergents, fabric softeners, hangers, and other necessary items.
- Reordering mechanism: Generate alerts or notifications when inventory levels fall below a specified threshold, prompting the restocking of supplies.

4. Pricing and Billing:

- Pricing rules: Implement a pricing structure based on factors such as clothing type, weight, special services (e.g., dry cleaning), and any additional charges (e.g., express delivery).
- Billing and payment: Integrate a payment gateway to process online payments, generate invoices, and manage customer billing information.
- Discounts and promotions: Allow administrators to set up promotional offers, discounts, and loyalty programs for customers.

5. Employee Management:

- Employee profiles: Enable employees to have their own profiles with personal information, contact details, and assigned roles.
- Order assignment: Provide administrators with the ability to assign orders to specific employees based on availability, workload, and expertise.
- Time tracking: Implement a mechanism to track employee working hours, breaks, and leave requests.

6. Reporting and Analytics:

- Order history and analytics: Generate reports on order history, including details such as the number of orders, revenue generated, popular services, and customer feedback.
- Employee performance: Track employee performance metrics, such as order completion time, customer satisfaction ratings, and productivity.
- Financial reports: Generate financial reports, including revenue, expenses, and profit margins.

7. Admin Panel:

- Dashboard: Provide administrators with a comprehensive dashboard displaying key performance indicators, system alerts, and important information.
- System configuration: Allow administrators to manage system settings, such as pricing rules, inventory thresholds, employee roles, and permissions.
- Customer support: Implement a customer support system, enabling administrators to handle customer inquiries, complaints, and feedback.
