Khandelwal College of Management Science and Technology, Bareilly

2015 - 2018

PROFILE

I love creating user interfaces that are not only beautiful, but also intuitive and easy to use. I have the skills and knowledge to bring interfaces to life. If you're looking for a motivated and dedicated developer who loves what they do, let's connect!

PROJECTS

Portfolio Website: A Comprehensive Collection of Projects I've Built

Live Demo ↗

- Technologies used: HTML, CSS, React, Formik, Yup.
- Displays a range of projects I have built
- Includes a contact form for recruiters to reach out to me

JobJotter: A React-Based Job Tracking Website with Statistics and CRUD Functionality

Live Demo ↗   **GitHub Link** ↗

- Technologies used: HTML, CSS, React, React Router, Redux toolkit, Styled components, Axios, Recharts.
- It helps users track job applications with features for adding, editing, and deleting jobs, and provides users with monthly stats of scheduled, pending, and rejected interviews.

Pig Game: An Interactive JavaScript-Based Game for Two Players

Live Demo ↗   **GitHub Link** ↗

- Technologies used: HTML, CSS, JavaScript.
- It's a game where two players can roll a die in turn and whoever reaches a score of 100 first wins.
- Demonstrated proficiency in JavaScript DOM manipulation techniques, including selecting, dynamically adding, and removing elements, as well as modifying their content.
