EXPERIANCE

- Dec 2022

  [Letmegrab], Surat

  Working on tasks related to Linear-Stepper With API-Calling, React-JS-Crud-Application, Shopping-Cart and Dashboard-Login-Page using technologies like: - HTML/CSS, JavaScript +React JS etc.

PROJECT

- Topic: - React-JS-Crud-Application
  Link:- [React-JS-CRUD-Application]
  Subject: - using HTML/CSS, JavaScript +React JS.
  Description: - A Crud-Application in ReactJS is an application that makes use of the ReactJS library to create an interactive, user-centric web application. It allows users to Create, Read, Update, and Delete records in a database, all in an easy-to-use interface. It also provides features such as authentication, data validation, and form.

- Topic: - React-JS-Shopping-Cart
  Link: - [React-JS-Shopping-Cart]
  Subject: - using HTML/CSS, JavaScript +React JS.
  Description: - A shopping cart is an essential part of a retailer's online store that streamlines the online shopping experience. It's software that allows website visitors to select, reserve, and purchase a product or service from an eCommerce interface.

- Topic: - Linear-Stepper
  Link:- [Linear-Stepper]
  Subject: - using HTML/CSS, JavaScript +React JS.
  Description: - Stepper display progress through a sequence of logical and numbered steps. They may also be used for navigation. Steppers may display a transient feedback message after a step is saved.

- Topic: - Dashboard-Login-Page
  Link: - [Dashboard-login-page]
  Subject: - using HTML/CSS, JavaScript +React JS.
  Description: -It was This is a login page for users to access the dashboard of a React JS application. The page includes input for a username and a password. The user can then click the 'Login' button, which will then validate the credentials entered and take the user to the dashboard.

There is also a 'Forgot Password' link on the login page, which allows the user to reset their Password

MY PROJECT

- Topic: - Contact - Management
  Link:- Contact - Management
  Subject: - using HTML/CSS, JavaScript +React JS.
  Description: - To manage contacts in React.js, create a stateful component
  to store contact data, render a form to add/update contacts, and display a list
  of contacts using mapped components.
- Topic: -Weather-App
  Link:- Weather-App
  Subject: - using HTML/CSS, JavaScript +React JS.
  Description: - Display current weather conditions and forecast data, providing real-time
  updates and a user-friendly interface.
